RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies and Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** -- The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

Prominently
point

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board;

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

- **TRAFFIC** - The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RE: Matinecock Court (DEIS) Environmental Impact Statement

TOWN OF HUNTINGTON
DEPARTMENT OF PLANNING
AND ENVIRONMENT

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development

The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court (DEIS) Environmental Impact Statement

TOWN OF HUNTINGTON
DEPARTMENT OF PLANNING
AND ENVIRONMENT

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development

The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

TOWN OF HUNTINGTON
DEPARTMENT OF PLANNING
AND ENVIRONMENT

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

(DEIS) Environmental Impact Statement

TOWN OF HUNTINGTON
DEPARTMENT OF PLANNING
AND ENVIRONMENT

Dear Ladies & Gentlemen of the Board;

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC** - The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT** - The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

* TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

* SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportably be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. Theses hazards would directly

affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

* SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

* TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

* SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportably be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. Theses hazards would directly

Handwritten initials and a signature mark.

affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

* SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS –** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

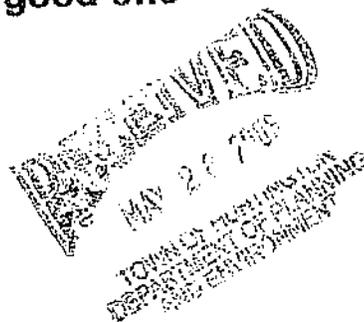

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** -- The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

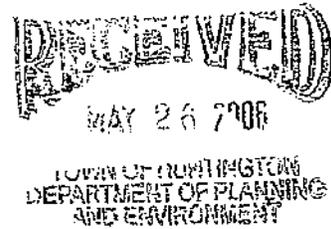

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

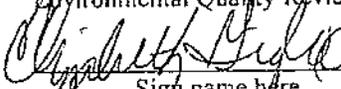

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

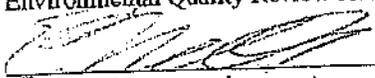

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

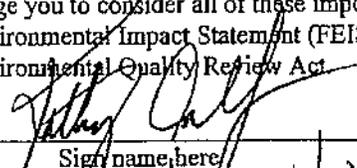

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

(DEIS) Environmental Impact Statement

TOWN OF HUNTINGTON
DEPARTMENT OF PLANNING
AND ENVIRONMENT

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS –** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.
The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental-Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

* **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all.

It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

* **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportably be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. Theses hazards would directly

affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

* SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

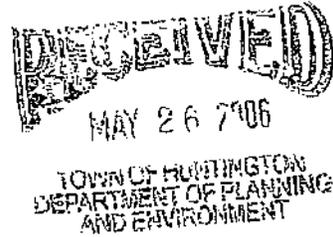

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS –** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

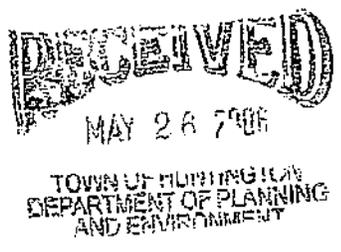

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences
- **RENTAL UNITS –** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS –** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS --** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board;

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

- **TRAFFIC** - The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

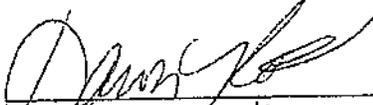

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

* **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

* **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly

affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

* SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

- **TRAFFIC** - The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

- **TRAFFIC** - The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

* SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

* **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.

* **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly

affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

* SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

* RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- 1 TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- 2 SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- 3 SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- 4 RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board;

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development. The concerns are listed as follows:

- **TRAFFIC** - The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING** - The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court (DEIS) Environmental Impact Statement
JUN 26 PM 2:14

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

RE: Matinecock Court
(DEIS) Environmental Impact Statement

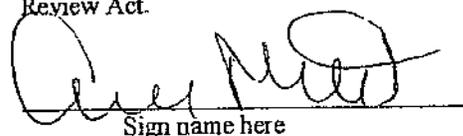

Dear Ladies and Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- RENTAL UNITS – The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court (DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

RE: Matinecock Court (DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement

SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.

SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.

RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

RE: Matinecock Court
(DEIS) Environmental Impact Statement

05 MAY 26 PM 2:17

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC**- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT**- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING**- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS** - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act

RE: Matinecock Court
(DEIS) Environmental Impact Statement

Dear Ladies & Gentlemen of the Board,

This letter is written to you in concern for the impending health, safety and environmental hazards that will occur upon the development of the property described above. The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- **TRAFFIC-** The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- **SEWER TREATMENT PLANT-** The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- **SOIL TESTING-** The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- **RENTAL UNITS -** The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.

The concerns I have are vital and extremely important to the health and welfare of the surrounding community as well as the future residents of the development.

The concerns are listed as follows:

- TRAFFIC- The estimated 300 plus vehicles from the new residents added to our already overpopulated roads will not only create a safety hazard to all those traveling, but the children in particular who must walk along the common roadways in order to attend the (2) schools located in the direct vicinity of the development. The emissions and air pollution from the idling vehicles will create an overwhelming health hazard to us all. It is obvious that the traffic impact must be revisited and reassessed as part of the final (FEIS) statement.
- SEWER TREATMENT PLANT- The proposed sewer treatment plant that will reportedly be running at maximum density upon completion of the project is particularly disturbing. The obvious health concerns from this plant must be reevaluated. The odors, pollution and potential spills could be extremely detrimental to all residents. These hazards would directly affect the residents of the development, surrounding neighbors and the students and faculty in the schools which are located within yards of the site.
- SOIL TESTING- The grounds on which the proposed project will be constructed has been rumored to be tainted with numerous toxins and possible carcinogens from years of farming and the subsequent use of pesticides and fertilizers. Upon ground breaking for the development these toxins will obviously become airborne. Once airborne these poisons will contaminate the air and become a health hazard to the entire community. With our children attending school within yards of the project we cannot help but feel the most sense of urgency with regards to this matter. More extensive testing must be done before any further land clearing and or development commences.
- RENTAL UNITS - The elimination of the 70 plus units could only improve the proposed project in the eyes of the community. The overall environmental, health and safety issues could be greatly improved by lowering the amount of people, vehicles and pollution that will impact the community. Only owner occupied homes will help maintain and preserve the sanctity of the community as taxpaying residents have a vested interest in the community.

I urge you to consider all of these important issues for further study and include them in the Final Environmental Impact Statement (FEIS) in accordance with the (SEQRA) State Environmental Quality Review Act.
